

“EVERYONE INNOVATOR MISSION”

INNOVATION SCHOOL FOR CHILDREN

There is highly competitive environment for students in and outside of schools and universities. They need to be prepared to face the challenging scenarios in every walks of their lives. Problem Solving and Leadership are the key life skills that are important to be learned and practiced in early age.

We believe that children have high potential to solve the problems in their surrounding if they are empowered with right skills and training. They can **'create innovative ideas and impactful solutions'** and implement them.

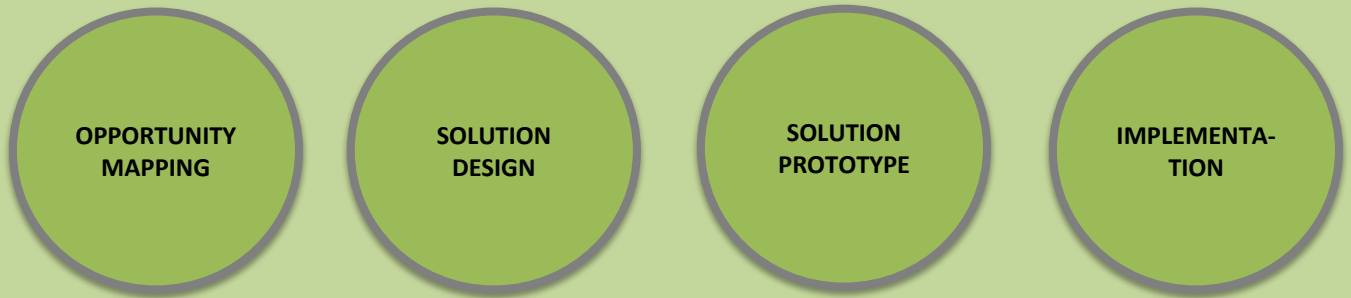

If children are taught how to look at problems to be an opportunity and turn problem situation upside down to work in their favor they will be confident. They will have positive attitude towards life problems with change of mindset.

Through this program we train children to look for new opportunities/problems and build solutions around them. We train them on topics of **Problem solving, Human Centered Design and Innovation.**

Children get experience of using various **tools and techniques.** We facilitate and guide them to **develop innovative Product, Service and Concept solutions** to the problems under consideration. These concepts address real-world needs and potentially have lot of social impact and economic value creation .

What will children learn ?

- How to collaborate and co-create solutions with others
- How to creatively look for opportunities or problems.
- How to design and build solutions around the opportunities and problems.
- Tools and techniques of Design and Innovation.
- How to prototype the solutions , test and pitch them.
- How to implement the solutions.

So what do you think ?

If you are looking forward to develop your children's skills of creativity, innovation and problem solving while they build some interesting ideas and implement them to bring about a positive change in the society or their own life; "INNOVATION SCHOOL" is the right program they should participate.

If you are a School working on development of children skills and giving them hands on practical exposure in the real world we can help you. If you are a Government Agency, NGO or Company CSR working on education and sustainable development we would love to work with you to create INNOVATIVE SOLUTIONS and implement them.

If you are a looking for interesting ideas to bring change you are most welcome to partner with us.

Young children will get chance to learn from top professionals and Mentors. They will develop innovative Ideas and projects and will have opportunity to win the prizes, showcasing work in Science Park exhibition centre. They will get certificates for their achievements.
